

Consistent Care with Edge-Based Virtual Desktops

CDI at the edge delivers secure, portable virtual desktops that healthcare providers can access anywhere. These desktops are hosted on local edge devices that sync with hospital systems when possible but operate independently in disconnected modes.

Benefits

Providers receive the same experience regardless of location, improving care delivery and reducing IT overhead.

- > **Persistent Clinical Access:** Always-on access to tools—even offline.
- > **Simplified Compliance:** Encryption and isolation support HIPAA standards.
- > **Adaptable to Any Location:** Perfect for mobile clinics or outreach programs.
- > **Device Consolidation:** Minimizes endpoint sprawl and complexity.
- > **Seamless EHR Integration:** Maintains continuity across patient data systems.

Intro to Edge Computing

In today's fast-evolving landscape, the need for real-time data processing and actionable insights at the edge has become a critical priority for mission-critical operations. Odin's Edge, powered by Norseman Defense Technologies, is designed to address these demands by delivering scalable, high-performance computing solutions in ruggedized, portable environments. This solution brings unparalleled flexibility, enabling data-driven decisions at the tactical edge while ensuring robust security and seamless scalability.

Core Capabilities:

- > **Offline Access to Patient Records:** Secure local data caching.
- > **Portable Clinical Environments:** Consistent experience across care locations.
- > **Built-In Compliance Safeguards:** Supports HIPAA and healthcare standards.
- > **Rapid Provisioning for Surge Teams:** Scales instantly during emergencies.
- > **Edge-Based Health IT Infrastructure:** Supports diagnostics, imaging, and analytics locally.
